

FEDERAL COIN

What is **FEDERAL COIN**

FEDERAL COIN automates crypto trading and forex with the help of robots. Due to this, it will be able to take more accurate and efficient decisions on leverage and business. In recent times, robotic trading has earned great popularity among crypto and forex traders.

It helps to monetize the trade even during sleep. This trading style entails the breakdown strategy of entering and exiting in the new points. Such entrance and exit are also facilitated by using technical indicators and the real-time data of the market.

Furthermore, this trading is programmed for monitoring a live data market that executes trading according to pre-defined parameters and emanates out from crypto exchanges. Recently, the trading industry is automatically washing with the developers who claim on the provision of the best bots. But the reality is that none of them is still close to FEDERAL COIN

The trading bots and automated trading system of FEDERAL COIN along with established backtester will be used. Back-tester is a tool that acts as a strategy performance stimulator against the historical data for the establishment of profitability and risk. When the back tester is performing its task, the output statistics of the program facilitate determining the effectiveness of the strategy.

PROJECT INTRODUCTION

FEDERAL COIN is a simplified and secure participation in Staking, generating yield by interacting the Smart contract mechanism. FDR Coin has made a stealth launch on the most advance chain in the crypto which is ARBITRUM. Expanding the community by P2P networking with a mission to create a Giant space in the Blockchain Industry.

FDR ROADMAP

WHAT IS ARBITRUM?

Arbitrum's suite of scaling solutions provides faster speeds at a significantly lower cost, with the same level of security as Ethereum. One of Ethereum's most promising Layer-2 solutions is Arbitrum, which is designed to boost Ethereum's speed and scalability by securely offloading the bulk of the network's transaction validation processes to a second-layer blockchain.

By moving most of the computation and storage load off-chain, Arbitrum enables higher throughput and lower fees compared to Ethereum. Additionally, Arbitrum benefits from Ethereum's security and compatibility, making it a secure and reliable solution for developers. 1 day ago

Arbitrum has just launched its native token which will probably be scale like other chains did in past. This can be the next x100 chain. One pool of **FDR** is paired with ARB token
